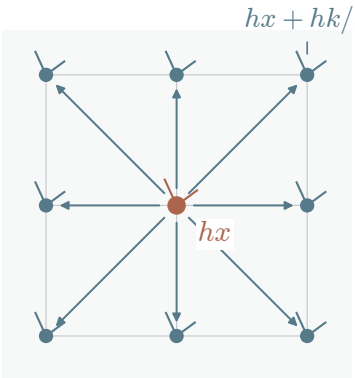
(a) Copy in transported bases



Transport basis and spinor together

$$(I_n\psi)(3x+k) = \psi(x)/9$$

$$I_n^{\dagger} I_n = 1, \qquad \mathrm{d}I_n = 0$$

(b) Extend the coarse operator

coarse operator $H(U^{(n)})$

I_n

remaining fine states

$\mathrm{im}(I_n)$	$\mathrm{im}(I_n)^{\perp}$
$I_n H(U^{(n)}) I_n^{\dagger}$	γ_5
embedded coarse action	fixed eigenvalues ± 1

Extended coarse endpoint $H_{n,1}$

Fine space: $\mathrm{im}(I_n) \oplus \mathrm{im}(I_n)^{\perp}$

(c) Compare on this common space

fine, $s = 0$

$H_{n,0} = H(F_{h/3}U)$

$H_{n,s} = (1-s)H_{n,0} + sH_{n,1}$

extended coarse, $s = 1$

$H_{n,1}$

Proved uniform gap: $H_{n,s}^2 \geq g^2\, 1$ for $0 \leq s \leq 1$
