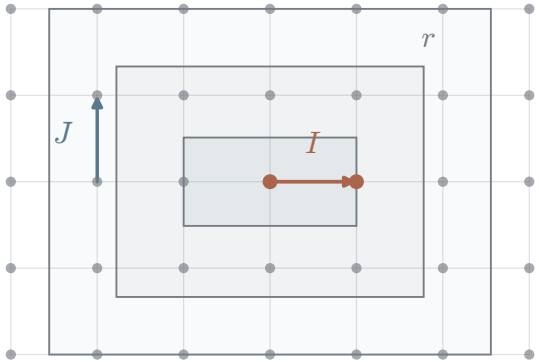
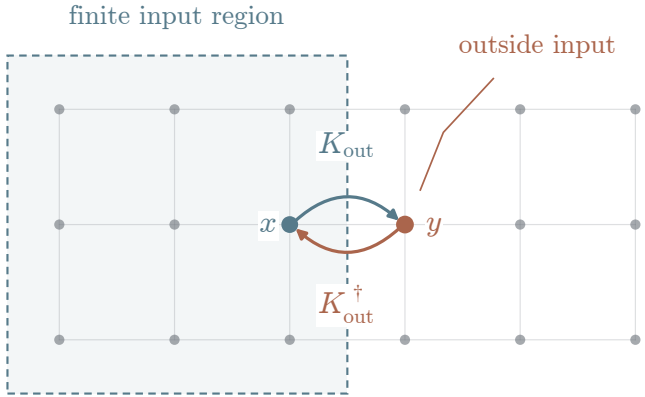
(a) Original-link supports



$$\sum_r e^{\lambda r} \sup_U |j^a_{\mu,r}(x;U)| \le C_0$$

(b) Keep all spinor outputs



$$(K_{\text{out}}^\dagger K_{\text{out}})_{xx} = (\mathcal{K}^2)_{xx}$$

Compressing first would discard the outside step.

Refinement bounds from the full estimates

$$\|B_n\|_{\lambda,\ell} \le C_\ell h_n^4 \quad (n \ge 1)$$

$$\|F^*_{h_n}\Omega\|_{\lambda,\ell} \le C_\ell h_n^2$$
